

# FOMOWinner

## Blockchain-based dividend game

Higher dividend ratio

Guaranteed prize pool funds are not abused through smart contracts

Whitepaper

2018.07 / V.1.0

The white paper will be improved

# SUMMARY

FOMOWinner aims to make players more secure through an open and transparent way, in FOMOWinner games, players can hold Continue to get a higher dividend yield than similar games and don't have to worry about the game shutting down.

FOMOWinner invests players in Ethereum blockchain and smart contracts, The game's funds are distributed transparently and cannot be tampered with by anyone. Even if the game developer no longer maintains, the game can continue to run. Players can still continue to receive dividends.

FMW is the project token for the FOMOWinner game, which holds FMW Continue to get bonuses from the game without participating in the game, and get FMW Value-added benefits from future currency increases.

## DISCLAIMER

All content in this white paper is based on the development team currently on FOMOWinner Description and planning for the future, possible future changes in the game itself and Impact, the development team can not make any commitments and compensation.

FOMOWinner as a bonus game exists after adding player bonus income Reduce the possibility of even losing money, for this possible FOMOWinner development team will not make any compensation, please carefully join the game.

# 1.OVERVIEW

## 1.1 Overview

FOMOWinner is a bonus game based on Ethereum.

The game is played in units of bureaus. Each game starts counting from 1 hour. Whenever a player buys a game item key with ETH, the game duration is automatically increased by 30s, and the player's ETH is assigned to the player who previously purchased the key. In the prize pool of this game, when the countdown is 0, the game will end. The accumulated ETH in the prize pool will be assigned to all the players of the game according to the rules. The player in the game can also withdraw cash in real time, and the buyer of the last key of the game will win the prize pool. Most of the ETH and FOMOWinner custom-made encrypted pet fish for the winners.

## 1.2 Detailed mode

There are three kinds of props involved in the FOMOWinner game, ETH, FMW, KEY.

Among them, ETH is used to purchase FOMOWinner's game props key. The bonuses in the game will also be distributed to the players in the form of ETH. FOMOWinner currently only supports the purchase of keys with ETH.

When the player uses a certain amount of ETH to purchase the corresponding number of keys, the amount ETH will be assigned to all the players of the game game and the prize pool according to the rules, and cannot be recovered. The player can recover the cost and obtain the income through the ETH income of the latecomer.

KEY is FOMOWinner's game props, and it is also a bonus certificate for each game. Only when you purchase  $\geq 1$  number of keys can you

Enjoy the ETH dividend of the game. The key is only used as the bonus certificate for each game. When the game ends and the bonus is completed, the key purchased by the player in this game will be automatically cleared and will not be brought to the next game. In the game, if you want to participate in the next game, you need to re-use ETH to buy the key of the next game.

At the beginning of each game, the price of the key is xxxx, but as the game of the authorities progresses, the price of the key will gradually increase. The specific price increase mechanism is as follows:

There are 3 basic principles for buying a key:

At the beginning of each game, the sooner you buy a key, the more dividends you have;

The more keys you buy, the more dividends you have;

The owner of the last key before the end of the countdown will receive most of the ETH rewards in the game's prize pool;

FMW is the token of FOMOWinner's entire project and proof of equity. A portion of the ETH in each game will be distributed free of charge to the holder of FMW, regardless of whether the FMW holder is involved in the game. FMW cannot be used to purchase keys in the game, and players can't get FMW in any form in the game. FMW is currently only sent by airdrop and private placement, and later can be purchased on the exchange with BTC, ETH, etc.

The price of FMW is determined by the operation of FOMOWinner games and market awareness. When the game operation is better, users with FMW can continue to get better dividends, then FMW will naturally cause the market to snap up, the price will be corresponding Ascension, at this time, the holder of FMW can choose to continue to hold the dividends that the game continues to receive, or to sell at a price higher than the purchase price to obtain a one-time gain.

to sum up:

Of the three tokens/vouchers, FMW is undoubtedly the most promising value token, as the longer the FOMOWinner game lasts, the more ETH dividends will be obtained by FMW holders, and the price of FMW is also As FOMOWinner continues to improve, as the FOMOWinner game continues, the benefits of holding FMW will far exceed the gains from the one-time sale of FMW.

# 2.INNOVATION

## 2.1 Innovation

At present, the dividend-based games on the market are mainly FOMO3D, and FOMO3D currently faces the following three problems:

The FOMO3D gameplay is complicated, resulting in too many roles to participate in the prize pool allocation, so that the bonus income of each game player is very small, and after each game is played for a short time, the player's income will decline rapidly;  
The FOMO3D game countdown time is too long, and a large number of prize pools are allocated to the game players after the game is over, resulting in a significant increase in the return period of the game players.  
The FOMO3D development team previously had a P3D project, and at least 10% of the ETHs were assigned to the team's previous P3D project, either in the player's purchase of the key or in the final prize pool assignment at the end of each game. FOMO3D players are obviously unfair;

The innovations and advantages of FOMOWinner are mainly reflected in the following three points:

FOMOWinner is simple to play and participates in the role assigned by the prize pool, so the bonus income of each player is greatly improved compared to FOMO3D;  
FOMOWinner has a short game time per game, and players can quickly get the prize pool allocation for each game;  
FOMOWinner's innovative combination of encryption cats, the winner of each round of prize pool will be able to obtain a unique "encrypted fish", like the encryption cat, "encrypted fish" not only makes the game more interesting, but also has collection value and appreciation potential;

## 2.2 Dividend mechanism

FOMOWinner has two dividend mechanisms.

One: key allocation mechanism

When a player purchases a key, the ETH paid is distributed as follows:

- ① This round of gamers: 70%
- ② Next round of prize pool: 20%
- ③ Recommended commission: 10%
- ④ Community Fund: 5%

Second: the distribution mechanism of the prize pool  
At the end of each game, the ETH in the prize pool is assigned as follows:

- ① Last key holder: 55%
- ② This round of gamers: 20%
- ③ FMW holder: 10%
- ④ Next round of prize pool: 5%

# 3.FMW Token

## 3.1 The use and value of FMW

FMW is the token of FOMOWinner's entire project and proof of equity. A portion of the ETH in each game will be distributed free of charge to the holder of FMW, regardless of whether the FMW holder is involved in the game.

FMW cannot be used to purchase keys in the game. Players cannot obtain FMW in any form in the game. FMW is currently only sent by airdrop and private placement. Later, it can be purchased on the exchange with BTC, ETH, etc.

The price of FMW is determined by the operation of FOMOWinner games and market awareness. When the game operation is better, users with FMW can continue to get better dividends, then FMW will naturally cause the market to snap up, the price will be corresponding Ascension, at this time, the holder of FMW can choose to continue to hold the dividends that the game continues to receive, or to sell at a price higher than the purchase price to obtain a one-time gain.

## 3.2 FMW distribution method

Unlike most other blockchain projects, FMW's distribution does not use the riskier ICO approach. FMW will use private placement, airdrops and community rewards for distribution. Later, when FMW is on-line, users can go through relevant exchanges. Use BTC, ETH and other cryptocurrencies for exchange, the exchange price is subject to the FMW price at that time.

### 3.3 FMW allocation structure

The total supply of FMW is 1 billion pieces, and will never be issued. The development team only stays 25% as a reward and operation. For the use, the vast majority of the rest are distributed to users. The initial allocation scheme is as follows:

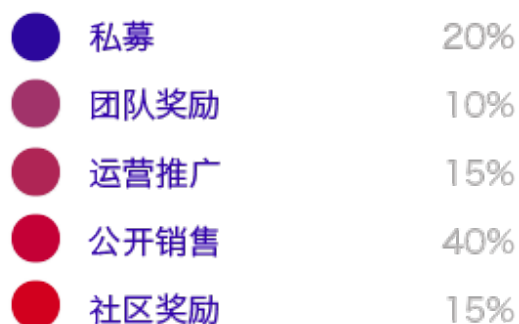

Private placement: 20%

Team reward: 10%

Operation promotion: 15%

Public release: 40%

Community reward: 15%

FMW总供应量为1,000,000,000

to sum up:

As the FOMOWinner game lasts longer, the FMW holder will also receive more ETH dividends, and the price of FMW will continue to increase with FOMOWinner, so as the FOMOWinner game continues, The benefits of having FMW will far exceed the gains from the one-time sale of FMW.

# 4.FOMO Winner Program

## 4.1 The price and quantity of key

The total amount of keys in the game is related to the total amount of ETH invested. The relationship between the two is as follows, which has been written in the smart contract:  
$$\text{ETH} = (78125000\text{key}^2 + 74999921875000\text{key}) / 10$$
 of the 18th power

The price of the key increases linearly with the increase of the total amount of the key. The initial price is 0.000075ETH. For each key added in the game, the price increases by 0.00000000156625ETH.

Remarks: Because the ETH quantity and the key price are quadratic functions, this makes it difficult for the price of the key to exceed the price of the ETH in the prize pool, so it can be guaranteed that the game will not stop because the key price is too high.

# 5.TEAM

Founder

Andy Liu

Graduated from Oxford University and worked for Morgan Stanley for many years. He has extensive financial experience and is committed to the development of near-blockchain finance.

Chief developer

Master B

Graduated from Tsinghua University, worked in Tencent, Ali, has participated in several large-scale projects, and has 20 years of rich development experience.

Chief operating officer

Noel

Graduated from Peking University, worked for Amazon, Baidu, and participated in several blockchain projects, familiar with community formation and marketing.

# 6.ROADMAP

Initial Pass Distribution I July 2018

We will distribute the FMW in stages, and investors can exchange FMW with Bitcoin and Ethereum cryptocurrency;

Pass issuance completed I September 2018

The initial VAT sales are over, and FMW is no longer distributed to any users and organizations;

FOMOWinner is online I September 2018

The game will be officially launched for the majority of players to experience;

FMW Pass to the Exchange I October 2018

At that time, FMW will log on to the exchange on a large scale, and the price of FMW will be greatly improved.
